## VISION

With our range of products, we are specifically focusing on the ecological aspects connected to a new lifestyle, where the outdoors symbolize being in touch with nature, where boundaries disappear and change. Our systems, working with renewable energy sources, are a valid answer to the need to preserve the world that we share with all living beings, to respect it and to keep it untouched.

## MISSION

The legacy we have been carrying on for over thirty years is a centuries-old tradition, strongly connected to the Earth and its bounty. Our mission is loyal to the spirit of cultivating, ploughing, manuring, watering, and harvesting. Faithful to our model, we cultivate human relationships and coordinate production with harvest seasons – just as it happens in nature. This modus operandi helped us to create a design tailored to evolving markets, and consolidating an organic, consistent set of corporate ethics that creates value and opportunity.

# EVENT SOLUTIONS MARQUEES

Giulio Barbieri S.r.l. marquees represent the core business of the company, which developed its first models as early as 1989. The evolution of materials and the advancement of technologies transformed the quality and safety of the products. The company provided the industry with innovative solutions that guaranteed a higher level of performance than what the market offered.

The key strengths, such as great wind resistance, high quality raw materials, simple assembly and safety in use, ensured that in a short time The national and European Events industry developed around Giulio Barbieri's offering.

Giulio Barbieri S.r.l. marquees have established themselves as the best performing in the world of Events and rental. Marquees that have been able to create outdoor spaces, but whose versatility and solidity has made them the choice also in the outdoor world, to complete and manage stable spaces in both the Ho.Re.Ca. and private sectors.

# 10 REASONS TO CHOOSE A GIULIO BARBIERI MARQUEE

## 1 QUICK AND EASY MOUNTING

Giulio Barbieri marquees, thanks to angular and linear molded components are easily assembled. The structures, made entirely of aluminum, are lightweight and maneuverable, allowing for a significant reduction in set-up time, whether for single structures, large areas or modular solutions.

## 2 100% ALUMINUM STRUCTURE

The materials we have always favored are aluminum and PVC, materials capable of great structural performance, plus both PVC and Aluminum are totally recyclable.

## 3 MODULARITY

Most of Giulio Barbieri S.r.l.'s marquees are modular and most of the models included in the range allow the development of projects that would not be possible with the traditional products present on the market today. We offer adaptive solutions to build spaces in a potentially unlimited way, combining shapes and sizes.

## 4 JOINT, HEXAGONAL AND OCTAGONAL SHAPES

Expanding the exploitable surface is not only a question of surface area: the various shapes available in the Giulio Barbieri S.r.l. marquees can be modulated among themselves in almost all their versions, thus the coverage of an area can be exploited in the best way, creating polygons suitable in terms of surface area and coverage.

The Giulio Barbieri S.r.l. marquee range offers square, rectangular, hexagonal and octagonal installations: there is no limit to what can be designed thanks to the modularity of the shapes.

## 5 INTERNAL OR EXTERNAL STRUCTURE

Giulio Barbieri's marquees are designed to best meet the aesthetic requirements of the location and use. It is possible to place the structural profiles above or below the PVC canvas, thus adapting the design of the marquee to the event for which it has been chosen.

The choice to maintain the internal structure can make the marquee more attractive when the event is concentrated outside, leaving the design free of visible aluminum structures, while when the activity is concentrated inside the marquee, the roof view without structural elements is undoubtedly preferable.

We design more welcoming and warm spaces that best fit the context of use, all of course maintaining the same sturdiness and solidity in both solutions.

## 6 SHEET TENSIONING WITH MANEUVERING ROD

The adjustment of the sheet by means of a maneuvering rod is a characteristic of Giulio Barbieri products and allows an ideal tension during the assembly and disassembly with a simple gesture. During seasonal changes, the PVC membrane can undergo slight deformations due to temperature variations and the system allows a quick and optimal adjustment of the tension without the need for scaffolding.

## 7 GRAPHIC PERSONALIZATION

Design and aesthetics are complementary elements. In addition to the variety of fabric colors, our marquees offer customized graphic solutions for the finishing and decoration of the PVC perimeter and roof sheets. In fact, the PVC textile membranes can be engraved and personalized according to the graphic design provided.

## 8 ACCESSORIES

Glass or transparent PVC walls, glass swing doors, decorative curtains with central opening or for false ceilings, LED lights, lamps, heaters or fans and aesthetic ballasts; the possibilities to make the marquee unique and versatile are numerous and allow to create spaces for ceremonies, events and outdoor spaces.

## 9 ADAPTABLE TO ANY TYPE OF TERRAIN

Often, especially in the case of large events, the ground on which the exhibition area is located is made up of natural soils that make it difficult to keep the structures perfectly horizontal, forcing the use of wedges that only temporarily solve the problem.

Giulio Barbieri marquees have a unique feature: they adapt to any type of soil, earth, gravel, sand or reinforced concrete; the bases of the columns allow the marquees to be perfectly horizontal, thus keeping the structures perfectly level.

In fact, each model of Giulio Barbieri S.r.l. marquee is equipped with height-adjustable column plates, which allow to compensate for slopes and unevenness of the ground without affecting the vertical development.

## 10 VERSATILITY OF USE

Giulio Barbieri S.r.l. marquees have the peculiarity of being suitable for countless uses; the large structures, for example, are used to create spaces for group events, demonstrations, company meetings, while the smaller structures can be used for outdoor areas for the Ho.Re.CA sector or for private gardens.

Q Z E B O

MODERN DESIGN GAZEBO

Q Z E B O

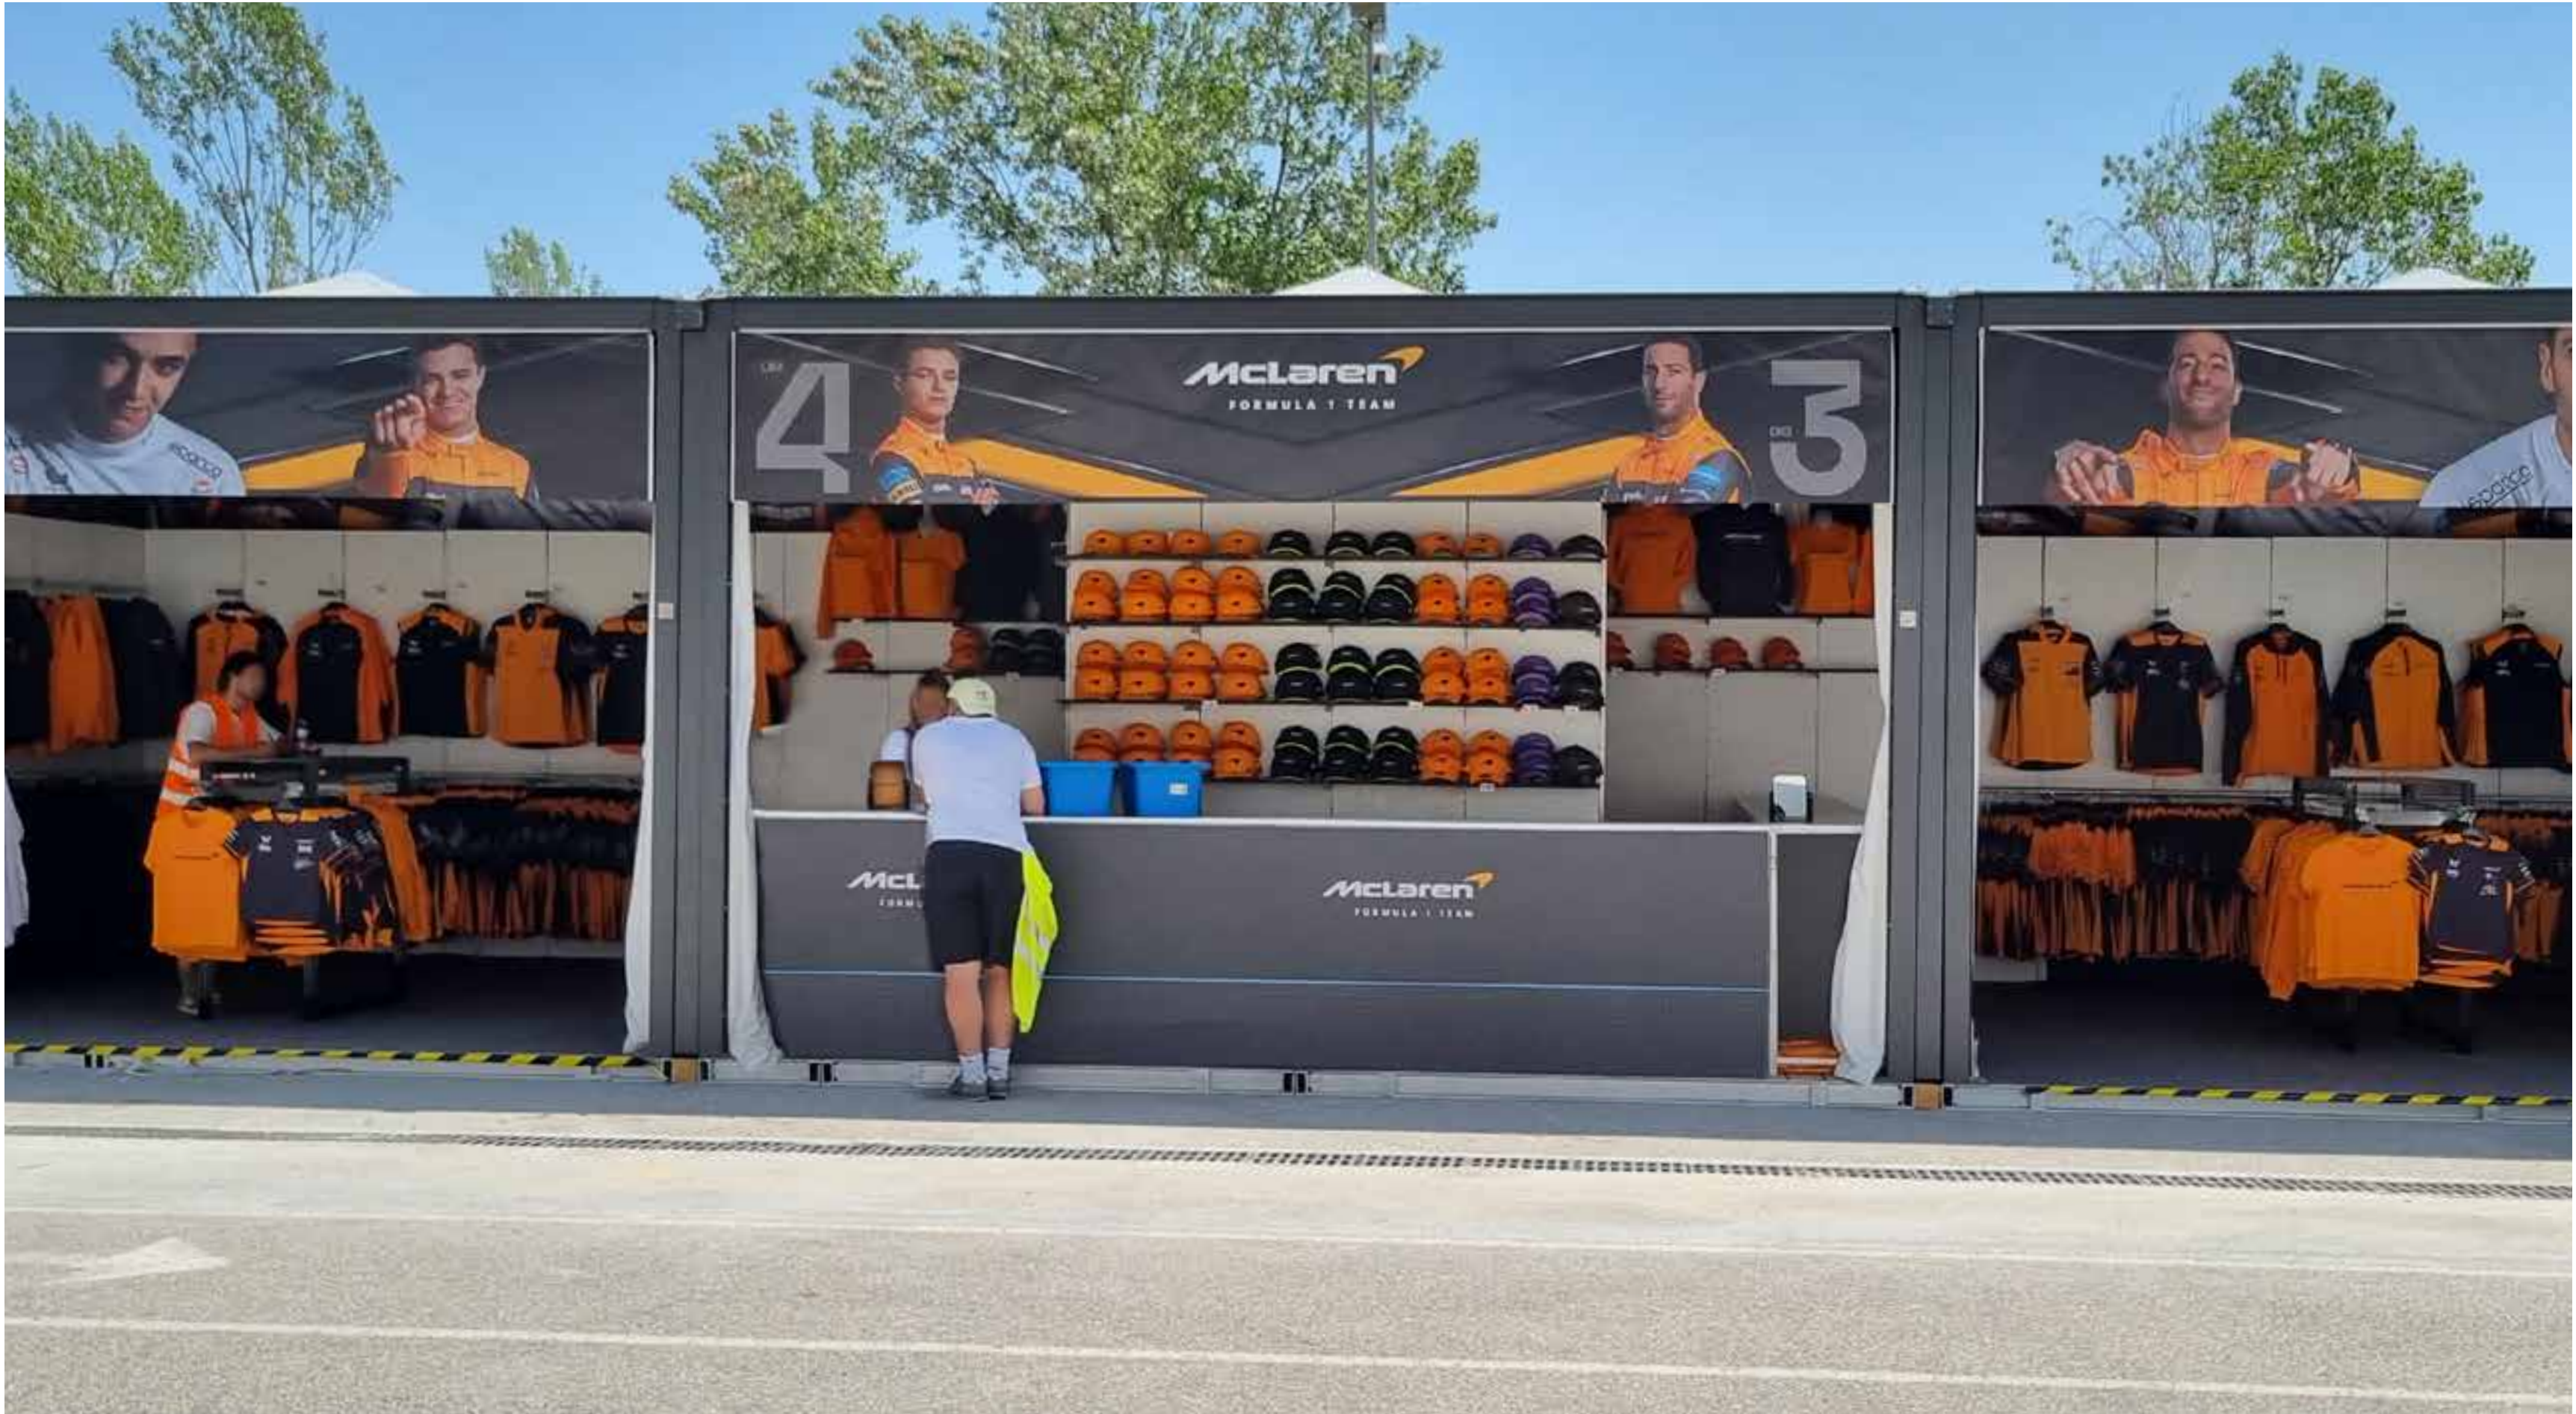

Qzebo is a one-of-a-kind modern gazebo. It revolutioned the clichéd dome shape, the classic spire, or round dome. With its almost linear roof, Qzebo represents a design never seen before. Qzebo is a reinterpretation of a gazebo, that leaves back traditions to mark the breaking point from the traditional archetype. Qzebo is the answer to the growing market demand for an innovative gazebo. The warm colors and the mat finish, hoven painted with high resistance epoxy powder, improve the product's resistance and make it a cozy-looking product, which sits in harmony with nature and the outdoors. The structure can be complemented with a number of accessories, such as the sliding edging profiles with PVC or glass membranes, decorative drapes, telescopic windshields made of glass. In order to optimize the comfort inside the structure, infrared heating and LED perimeter lighting are also available.

The simplified product that fulfills simple and essential functions. Two versions are available: with rectangular and square layouts, in the maximum dimensions of 400 x 400 cm. For each smaller size, it is possible to realize solutions to the centimeter; the modules can be coupled and juxtaposed and the external aluminum supporting structure creates a harmonious and elegant interior space. The components make the product compatible and modular with other structures of the same model.

Summer has an important feature: it can reach considerable dimensions, the most extended version reaching 600x600 cm. This increases the flexibility of the product, which can be adapted to projects involving extensions and larger covers. The square and rectangular modules can be combined and paired, and the external aluminum support structure creates a harmonious and elegant interior space. These components make the product compatible with other structures of the same model.

With Elite, you can compose interesting architectural geometries, which can strongly connote a project. There are square and rectangular versions, both modular with most of the models of the Giulio Barbieri S.r.l. marquee range. The widest side reachable with the central column is 13 meters. Elite is characterized by structural aluminum profiles on the outside, giving a pleasant, harmonious and neat vision of the interior.

# ELITE-IN

Elite-in is the internal structure version of the Elite model; available in square and rectangular layouts. Like the external-framed version, multiple compositions can be created for Elite-in with most of the models in the gazebo range. The largest reachable side with central column is 13 meters. The internal structural aluminum profiles free the Architectural ensemble from structural elements, greatly improving the integration of the design into the landscape or context.

# MEETING

A unique and singular solution, with Meeting we manage to create a single interconnected space without separations or central columns. The external tubular supporting structure favors the creation of a harmonious interior space, with particular attention to every detail; the largest side of the octagonal structure is 6 meters.

EVENT SOLUTIONS MARQUEE

# MEETING-IN

A unique and singular solution, with Meeting we manage to create a single interconnected space without separations or central columns. The internal tubular supporting structure emphasises the design of the roof covering sheet. From an external point of view, it becomes a free and dynamic surface. The largest side of the octagonal structure is 6 meters.

**GUARANTEE AND QUALITY**

- The products are CE certified. The booklet with the DOP declaration of performance accompanies the product until its complete installation.
- Fireproof certificates are provided for each type of fabric used.
- The structures are structurally checked and comply with the loads required by the standards in force UNI EN 13782:2015 Temporary structures - Tents - Safety, DM 17 January 2018 Technical construction standards and UNI EN 1999 Eurocode 9 - Design of aluminum structures.
- The aluminum structural elements are guaranteed for five years\*.
- Since 1990, we design and manufacture our collections entirely in Italy in our factory in Poggio Renatico.

\* For more details on the guarantee, please refer to the general conditions of Giulio Barbieri S.r.l. published in the official price list.
